WORK EXPERIENCE

Senior QA Automation Engineer

Ruby Receptionists, Inc

05/2022 - Present

Achievements/Tasks

- Developed, maintained, and troubleshooting Selenium automation scripts for Web applications, Mobile applications (Android and iOS), and UX.
- Performed manual and automated testing at unit, functional, integration, and user acceptance testing levels.
- Through testing identified and advised on areas of weaknesses in Web applications and Mobile applications, for performance and user experience.
- Assessment of business requirements to form test cases before or as code is being developed, to perform testing of the software being developed.
- Identification of bugs via testing and user tickets, then performed root cause analysis to identify causes and potential solutions.
- Use of GitHub as a change management system for automated test scripts and application code.

QA Automation Engineer

U.S. Bank

06/2018 - 05/2022

Responsibilities

- Developed Java-based Automation for functional and regression testing with a focus on code quality and reusability.
- Ensured both successful implementation and execution of developed test scripts for team and department use.
- Department subject matter expert on automated test suites, script development, and test script development standards.
- Analysis of business requirements for use in test planning, scope of testing, and development of automated test scripts.

Claims and Referral Supervisor

Kaiser Permanente

08/2013 - 05/2018

Responsibilities

- Multiple years of experience within a highly regulated industry with progressive responsibility.
- Experience includes leadership/management, project management, team/organizational effectiveness, and change management.
- Responsible for high-level projects and presentations which required acute attention to detail, critical thinking and analytical and problem-solving skills.
